

FINISHING TOUCHES

Become detail oriented.

The little details give your home its unique personality. Start with the largest design elements and fine-tune your concept with small pieces of personality and interest. By selecting just the right lighting, faucets, and furnishings, you can change the entire feel of a room. Eheart Interior Solutions offers a variety of small elements that offer the greatest presence. Let us help you find the perfect additions to complete your space.

Lighting

Lighting brings your interior to life. The proper lighting offers more than illumination; it establishes mood. When planning your lighting, you should consider the room's usage, the atmosphere you desire, and the elements you want to emphasize. The three different forms of lighting you need to consider are general, task, and accent. General, or ambient lighting, provides the room's overall illumination. Task lighting helps you perform specific tasks, like reading or cooking. Accent lighting spotlights a specific design element like a painting or wall texture. Lighting fixtures come in a variety of shapes and styles. Some of the most popular are chandeliers, pendant lighting, recessed can lights, track lighting, decorative lamps, and ceiling fixtures. The Eheart designers are certified by the American Lighting Association (ALA) and can help you design the ideal lighting plan for your room.

Plumbing fixtures

While faucets come in a variety of finishes like brushed nickel, stainless steel, brass, and oil-rubbed bronze, they should be made of copper, brass, or other high-quality materials. Various styles are also available from traditional to contemporary. When choosing the finish and shape of your plumbing fixtures, consider the other finishes, lighting fixtures, and shape and form of the design within the room. Widespread faucets consist of a separate piece for the spout and handles. Wall-mounted faucets work best for above-the-counter and freestanding basins, as well as showers. Consider available features for modern conveniences like spray systems, water filtration, and matching accessories.

Electric and radiant floor heating

Pamper yourself with warm floors. Consider installing a radiant or electric floor heating system under carpeted, hardwood, tile, or stone floors. The system is managed by a thermostat that warms the floors before you enter and turns the system off when it is not needed. Eheart designers can even design your shower with a radiant heat system in the floor and seat.

Home furnishings

Space plans help organize a room by adding flow and flexibility. The Eheart designers can help you establish a space plan using your current furnishings and new pieces for your room. They can assist you with selecting furnishings from our vast collection of custom fabrics and finishes, and may even suggest adding a little more spice with mirrors, wall art, and rugs.
